## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Coles (US 4,956,921).

As regards to claim 1, Coles teaches a method for processing information from a tool moving in a borehole within a geologic formation, including steps of sensing parameters of the tool motion using at least one accelerometer and at least one magnetometer attached to the tool, and computing parameters of the tool motion in a borehole reference frame based on measurements from the at least one accelerometer and the at least one magnetic induction sensor by taking into account the orientation of said at least one accelerometer in relation to the gravitational field ( figure 1, numerals 14, 16 18 and 22; column 3, lines 12-66, column 4, 5 and 6, lines 56-68, 1-25 and 18-46). Further, monitoring the computed parameters and comparing the monitored parameter(s) to standard operating parameters, and generating a signal if one or more monitored parameters fall outside a predetermined range of operating values (figure 1, numerals 22, 24, 30, 32 and 34, column 6, lines 47-68, and column 7, lines 10-68).

As regards to claims 2-6, Coles further teaches at least two accelerometers, and at least two magnetometers, wherein various gravitational components are measured,

measuring tool motion and providing compensation for it, thus providing optimal activation time for NMR measurements (figure 1, column 5, lines 1-23, see abstract).
